

Bespoke CIP – Cleaning in Place

Duration half day

Target Audience

This course, which is delivered at the customer's site, is for anyone who uses or needs to understand more about CIP. This could be a Hygiene Manager or Production Manager as well as engineers, process operators and lab / quality personnel. The course is pitched at beginner / intermediate level.

Course Description

This bespoke CIP training course is designed to help your employees understand the workings of your specific CIP set at your site. In advance of the training, you are required to send over schematics, the P&ID (Pipe & Instrumentation Diagram) and any photos you may have of the CIP set. The tutor will study these and tailor the training accordingly to ensure the training is aligned with your specific CIP set, therefore adding further value to the training.

Learning Outcomes

On completion of the training the learner will understand:

- Types of CIP systems
- Instrumentation to regulate and monitor what is needed to ensure the CIP systems works properly and repeatedly and to ensure it complies with both BRC regulations and customers' codes of practice
- BRC v.8 – dedicated section to cover everything CIP related in the new regulations
- What chemicals are required
- Key requirements for tank and pipework cleaning
- Ancillary equipment such as flexible hoses and swing-bend panels
- Aborted cleans and action needed for remedial cleans

Assessment - A selection of questions marked by the tutor

Certification/Accreditation - CPD
