

Introduction

All of us rely on electricity in some form or another, both at home and in the workplace. From heating, to lighting, to using computers and household appliances. When electricity is not handled correctly, it can cause disruption, in the form of power cuts, destruction to property, injuries, and even death. The main cause of accidental fires is due to faulty appliances and electrical leads.

Who it is for

This course is for anyone in the workplace.

Course aim

The aim of this course is to give you a basic level of knowledge relating to what electricity is, how it can cause injury and the kinds of control measures you can follow to help minimise the risk of electrical hazards causing injury, or even death.

Course content

This online course covers the following topics:

- An introduction to electricity
- Statistics
- What is electricity?
- Measuring electricity
- Common terms
- How electricity 'behaves'
- How electricity causes harm
- Injuries caused by electricity
- Electrical safety procedures
- Health and safety principles
- Risk assessments
- Control measures

Course duration

The average time required to complete the learning is approximately **30 minutes**, however the course is designed to go at the pace of the learner and can be completed in more time if needed.

Assessment

The online assessment for the course consists of **15 multiple choice** questions. In order to be successful, candidates must achieve a **75% pass mark (12 or more)** to obtain the certificate.

Certification

On successful completion of the assessment, the candidate will be able to print /save their certificate. In addition to this, an e-mail is sent to the candidate containing a link to the certificate. This is the simplest, most convenient way to achieve compliance. Also, a QR code has been added to the certificate, which can be scanned by a smartphone to establish the certificate's validity.
